ABOUT ME

Ambitious and motivated AI engineer candidate, focused on transforming advanced technologies into practical solutions. Committed to continuous learning, innovation, and creating long-term impact in the field of artificial intelligence.

EDUCATION

BACHELOR'S DEGREE
MECHATRONICS ENGINEERING

BAHCESEHIR UNIVERSITY Istanbul, Turkey
2020 - 2025

EXPERIENCE

COOL DIGITAL SOLUTIONS 09/2025 - Current

Built a stock market analysis platform powered by multi-agent AI systems on a fintech project. Designed parallel agent pipelines with Strands Agents and LangGraph on AWS Bedrock for financial sentiment analysis and technical indicator computation. Developed MCP servers (FastMCP) for agent-to-tool communication and deployed serverless infrastructure (Lambda, SQS, DynamoDB, S3) with full CI/CD. Currently serving as the sole AI and backend engineer for Maxeo.ai, an AI-powered platform that optimizes brand visibility across AI search engines (SEO/GEO/AEO). Architecting agentic orchestration systems with LangChain, LangGraph, Tavily, and MCP across multiple LLM providers (OpenAI, Gemini, open-source), designing prompt pipelines with intelligent fallback chains, and managing async task orchestration with Celery on AWS. Implementing end-to-end observability with LangSmith and cost optimization at scale.

KAFEIN TECHNOLOGY SOLUTIONS 06/2025 - 09/2025

Contributed to an enterprise AI workflow automation platform by building modular MCP servers (FastMCP) and backend services (FastAPI), and orchestrating AI workflows with LangChain/LangGraph and flow tools such as n8n, Langflow, and Flowise. Designed RAG systems on PostgreSQL + PGVector with optimized chunking, dynamic embeddings, and reranker integration, and improved observability with LangSmith.

GUESS 08/2024 - 02/2025

Full-time IT intern at Guess Turkey, handling regional tech support and head office equipment. Develop Power Automate solutions for HR workflows, assist finance ERP automation, and collaborate with GUESS Europe IT Lugano.

TAV TECHNOLOGIES 02/2024 - 06/2024

During my 5-month R&D internship, I worked on AI projects including Time Series Analysis, Human Action Recognition, Object Detection, and API development. I explored advanced solutions using Hugging Face, Papers with Code, Kaggle, and GitHub. Gaining hands-on experience with CNN/RNN architectures in PyTorch, I focused on model training, fine-tuning, and optimization, while also contributing to dataset design and model logic, enhancing accuracy and efficiency.

TECHNICAL SKILLS

Programming Languages: Python
AI & ML: Model Training & Fine-Tuning, Time Series Forecasting, NLP (Prompt & Context Engineering), Computer Vision, LLMs & Multi-Agent Systems, RAG Architectures, Chatbot Development, Workflow Automation
Libraries & Frameworks: OpenCV, Pandas, NumPy, Matplotlib, FastAPI, FastMCP, LangChain, LangGraph, Supervision
Platforms & Integrations: N8N, Langflow, OpenAI API, Hugging Face, ElevenLabs, Supabase, Roboflow, DeepStream
Cloud & Infrastructure: AWS, Google Cloud, Docker, Linux, Runpod

CERTIFICATES

- MCP Tools - Hugging Face 06/2025
- AI Agents - Hugging Face 02/2025
- PyTorch Bootcamp - OpenCV University 02/2025
- AI Developer Specialization - IBM 12/2024

PROJECTS

SEMANTIC CV MANAGEMENT WEB APP 06/2025

Developed a CV search and management web app with FastAPI, React, Supabase, LangChain, and OpenAI. Implemented hybrid search(keyword+embeddings in Supabase) with GPT-4.1-nano reranking and natural-language CV queries via LangChain agents.

SMART TRAFFIC MONITORING 03/2025

Built a real-time RTSP system to classify vehicles, estimate per-lane speeds, and detect emergency-lane violations. Fine-tuned a YOLOv12n model on a custom Roboflow dataset and used polygon-based lane zones with tracking (OpenCV/Supervision) to analyze lane flow across multiple camera views.

REAL-TIME THREAT DETECTION 02/2025

Built a fully local, real-time CCTV firearms detection system using fine-tuned YOLOv11n (custom Roboflow dataset, Colab) and DeepSeek 1.5B for threat analysis. Automated alerting via an email agent, orchestrated end-to-end with LangChain for streamlined threat management.

AI SUPPORTED SMART GROWBOX (CAPSTONE) 10/2024 - 05/2025

Developing a closed growbox for fully automated indoor cultivation, integrating Raspberry Pi 5 environmental control, a YOLO-based camera for plant health assessment, and OpenAI-powered decision-making. Built a FastAPI dashboard providing health analytics and fruiting-time estimates using time-series analysis and computer vision.

MVP AI WEB APP DEVELOPMENT (FREELANCE) 03/2025 - 06/2025

Developed the MVP of a voice-enabled AI web app that generated structured documents from real-time conversations. Built an end-to-end AI pipeline using GPT-4o mini, Whisper, and ElevenLabs with a Python/FastAPI backend, prompt-engineering logic, and Supabase integration.

COFFEE SALES ANALYSIS AND PREDICTION 07/2024

Trained a time series forecasting model with PyTorch using sales and weather data to predict a coffee shop's daily sales. Used Pandas and NumPy for preprocessing, and Matplotlib to visualize results for improving business efficiency.
